

Charging Up Your Body for Health

Is Energy Medicine the Future?

Ten years ago, Jim Chapman was dealing with a minor circulatory issue that was misdiagnosed by doctors as a blocked aortic valve. While undergoing his second needless surgery, he died three times and suffered five strokes, resulting in a substantial loss of eyesight, memory and large and small motor functions.

"Prior to the surgery Jim was a strong vibrant intelligent man with 20/20 vision," his wife Evelyn said. "After the second surgery Jim had to relearn everything: walking, eating, talking, writing... everything!"

"Although he didn't regain motor skills in his fingers and wrists, over the years he experienced gradual improvement in his eye sight and arms and legs so that he could walk a little bit. His arms felt like they had heavy weights attached them though. Often when he tried to run, he would fall to the ground as if the extra weight in his arms was pulling him down."

Since that tragic day ten years ago on the operating table, life has certainly been challenging for the Chapmans; yet, they never lost faith or gave up hope for a miracle. Evelyn says, "For ten years we've been praying for a miracle and five weeks ago our prayers were finally answered when my brother purchased a BPE PRO 6000 (Bio-Photonic Multiwave Oscillator System).

"We were skeptical at first, but when you have faith you have to keep an open mind.

"After the first session Jim was very quiet and I just assumed nothing happened for him. The next day he startled me by demanding that I take him back for a second session on the BPE PRO 6000. I asked him, 'What's going on?' He said, 'The heaviness in my arms...it's nearly gone!'"

Evelyn said, "Jim has always loved fishing. Just this past week he was able to go fishing again, and for the first time in ten years he was able to fly fish, tie his own knots...I'm so deeply, deeply grateful to God for this gift...it's hard to believe, but Jim continues to improve...the results he's getting are truly astounding."

"For over 5,000 years the Chinese have approached the body as an energy system first", says Dr. Ari Klein, an innovative and successful practitioner in Oakland, California.

"By restoring proper energy flow within the

body, health can be restored and maintained indefinitely. Energy medicine continues to be a very powerful and effective tool in Dr. Klein's busy practice. He reports, "not only has it helped correct many of my patients' issues; the energy appears to be highly effective as a **preventative and anti-aging therapy.**"

"The cell is immortal...as far as we know the pulsation of life can go on forever." – Nobel Prize winner, Dr. Alexis Carrell, of the Rockefeller Institute.

New York biophysicist Valrey Bolevsky, working in this field for over 45 years, reports many successes with cancer and other "incurable" diseases using his unique version of this technology. He explains the relationship between cellular energy and disease: "The body is an energy system. The body's chemical and mechanical processes are totally dependent upon the quality and availability of energy in the body. **The cells of the body are like little batteries.** Healthy cells hold 70 to 90 millivolts of energy. Cells have a positive charge on the outside and a negative charge on the inside, which is called polarization. When free radicals attach to cells, they knock holes in cell membranes **disrupting cell polarization.** This damages DNA and enzyme systems causing cell energy levels to drop. At 50 millivolts or less, the cell is sick: at 15, it's vulnerable to cancer, AIDS, etc."

Free radicals are created by stress, fear, bad diet, lack of water, minerals and nutrients, a build up of stored

toxins, etc."

Bolevsky explains that when cell energy is depleted the DNA telomere strand in each cell becomes dormant, causing cells to mutate. The body normally destroys mutated cells, but the gene designed to eradicate mutated cells becomes dysfunctional at low voltage. This, Bolevsky says, is where health issues start.

Development of **Bio-Photonic Energizer (BPE)** technology began in the early 90s by a team that included an advanced electronics engineer, who carefully studied the pioneering work of Nikola Tesla¹ and Dr. Georges Lakhovsky², who developed the Multiwave Oscillator concept in the early 1900s.

Energy medicine has a fascinating instructive history spanning 100 years, and scientific literature that includes some 400 articles as well as a number of books.

In 1934, Dr. Royal Rife, inventor of the Universal Microscope (65,000 X), the most powerful ever invented for viewing **live pathogens**, cured 16 out of 16 terminally ill cancer patients with his "Beam Ray" frequency generator, at the Scripps Clinic, in San Diego. The story of this amazing man is told in the book **"The Cancer Cure that Worked: 50 years of Suppression"**, written by medical journalist Barry Lines. [Order: www.RifeStore.com].

Users of BPE technology report a wide range of results ranging from pain relief, terminal issues, including cancer and AIDS. Some people with so-called "incurable" issues say they are experiencing miraculous results.

For example, Dr. Charles Wray, a chiropractor in Ojai, Calif., said: "Using this technology in my practice I've seen dramatic improvement in patients with multiple sclerosis and Parkinson's disease."

¹ Discovered AC power and designed and built the first power generators that Westinghouse put into operation at Niagara Falls in 1896.

² Russian born French scientist (1869-1942) who wrote the book, "The Secret of Life" and developed the **Radio-Cellulo Oscillator**, commonly known as the Multiwave Oscillator and wrote the book, which reports suggest he used to "cure" cancer and other life threatening illnesses.

Dr. Ari Klein says that so far he has found that no matter what the complaint, energy medicine seems to help, and several of his patients have subsequently purchased their own BPE PRO 6000s.

July of 2003, Bill Gonzales, 66, of Northern California, was diagnosed with Prostate Cancer that had spread to his bones, legs, back, shoulders and arms.

His PSA was taken three times over the course of one month. The first PSA was at 1,200, the second one at 3,668 and the third one at 5,205. He has copies of each doctor's report to corroborate this. "After being told by the doctors that this was an aggressive moving Cancer with extensive infiltrating tumors in all cores of my prostate, I purchased a BPE PRO 6000 (Bio-Photonic Energizer System).

"I explained to the doctors that I did not want chemotherapy or radiation. I was informed by the doctors that I had no choice but to go to chemotherapy if whatever I was doing did not work. For about two months I experienced pain throughout my body, a loss of appetite (even the foods I liked the most), which resulted in a drop of 30 pounds, and also suffered from insomnia.

After one month of using the BPE for five minutes three times per day I started feeling better, my appetite came back and I started sleeping without waking up during the night.

On November 19, 2003 my PSA was 0.56 and the doctor said "**this is a miracle and one for the medical record books**". I've gained about seven pounds since and have not taken any pain pills in over a month. My next PSA test is scheduled for January 27, 2004.

I am so thankful for the BPE PRO 6000; I believe it saved my life.

When asked about the BPE PRO 6000's effectiveness with AIDS, Mr. Scott Anderson, direct distributor for the manufacturer, told us:

"In 1996, a clinical study was conducted over a ten week period by Joseph Carozza, M.D., at the New York Health & Healing Center in conjunction with the Seattle IRB, using the BELS (Bioelectric Light Stimulator) unit; our second generation prototype. Several HIV+ patients participated, and the study concluded: The BELS unit worked very well on the non-HIV+ patients. With the HIV+ patients, none of the normal intercurrent illnesses, general fatigue and ongoing weight loss that were expected occurred...all

of the medical problems that were present at the outset of the study were either resolved or significantly improved."

Anderson also added, "Based on over 12 years of experience with this technology, we believe these patients would have continued to experience strong improvements had they continued using this technology beyond the ten week pilot study."

People simply stand or sit in front of the machine, which is about three feet tall with a circular arrangement of small tubes installed around one large specially designed handmade quartz tube. The tubes hold noble and other special gases. When a BPE PRO 6000 is turned on it emits a photonic and harmonically rich electromagnetic frequency field (70K Hz to 300 billion Hz). Photons, according to physicists, are the purest form of energy. Anderson believes that "disease is basically the result of de-energized cells," and the BPE restores energy to the cells so the body can operate optimally.

A medical researcher we spoke to speculated said, "One way the BPE may impact health is by producing coherent energy patterns. Coherent energy creates structure and form; the BPE's energy field could be aligning the structural components of each cell and changing the cell's capacitance - its ability to store energy. By doing this calcium, magnesium channels, insulin receptors and a multitude of other cellular components can be altered."

Dr. William Boyd, a practitioner in Seattle, theorizes that energy therapy works to devitalize pathogens, recharge the cells, move the lymph system, and help the body rid itself of stored toxins.

Various healing professionals agree that it probably helps to reestablish body's cell and tissue optimum frequency. By placing the body in a photonic electromagnetic field with full-spectrum harmonics, each part of the body picks out its optimum vibratory rate and begins resonating to it, thus restoring optimum oscillation rates throughout the body.

Maybe that's why users report results with a wide variety of health issues:

- A man from Eastern Washington who was diagnosed with cancer three years ago and given only six months to live, is still

alive and reports being cancer-free. He firmly believes the BPE PRO 6000 was primarily responsible for correcting his cancer issue.

- A man from Kent Washington who has suffered chronic pain for several years reported that with daily use he has been pain free since his second session earlier this year.
- A man with chronic indigestion and heartburn reported that after his third week of daily use, he is now able to eat any food without indigestion or heartburn.

Reports include improvements in everything from cancer, AIDS, diabetes, kidney problems, arthritis and colitis to thyroid problems and warts.

Dr. Boyd said his clinical experience shows that when used as an adjunct to a proper nutrition and detox program, energy medicine technology "appears to have phenomenal healing power."

"Biophysicist Valrey Bolevsky predicts that in the future, Bio-Photonic type technology will be in widespread use worldwide: "Although, in America, this field of research has been impeded over the past 70 years by obsolete healthcare business models relying solely on managing symptoms with very profitable drugs and surgeries, the Internet, combined with the alternative health industry, has caused a resurgence of interest in the power of this technology and interest is growing like a wildfire."

Schopenhauer said, "**All truth goes through three stages: first it is ridiculed; then it is violently opposed; finally it is accepted as self evident.**"

Those who rely on orthodox therapies are likely to ridicule this technology; those threatened by non-drug and non-surgical therapies will probably continue to oppose it; but for many of the estimated 1/3 of the population who have turned towards the alternative health industry, **the reality of this technology has reached the self evident stage.**
